

HomeOS

The memory your home never had — full
briefing, 7/13/26

What HomeOS is

Upload anything about your house — receipts, manuals, warranties, inspection reports, photos.

HomeOS reads them, remembers everything, schedules the upkeep, and answers questions **about your specific home** — with receipts to prove it.

Live today: **gethomeos.vercel.app** + iPhone app (TestFlight).

01

WHAT WE BUILT

The product surface

- **Web + iPhone at full parity** — 7 sections: Home, Care, Projects, Library, Worth Knowing, Ask, Settings
- Onboarding with real address autocomplete
- Household sharing — invite family by link, roles
- Camera receipt capture on iPhone → straight into the brain

The intelligence engine

One photo of a receipt becomes, automatically:

- The **appliance** in your Library
- Its **maintenance schedule** on the calendar
- The **spend** on your investment ledger
- A **warranty** with an expiry reminder
- A **replacement forecast** with real cost ranges

Works for receipts, manuals, warranties, inspection reports, and photos of data plates.

It checks before it writes

- Confident findings apply automatically — with cited sources
- Uncertain ones queue for **one-tap review** — nothing invents itself
- Ask answers carry inline citations + confidence levels
- Every AI write traceable to the document that proved it

The proactive layer

- Daily automatic sweep, live in production
- Warranty status rolls itself: active → expiring → expired
- Every appliance checked against **CPSC safety recalls**
- Full email spine built: invites, warranty alerts, safety alerts, care reminders, weekly digest
- **One API key from sending** — dispatch loop already proven live

Trust + safety

- Export everything you own as one file, any time
- Delete your account yourself — permanent, verified clean
- Rate limits on everything that costs money
- Terms + privacy policy drafted (16 decisions pending)
- Security-audited twice this weekend — two real bugs caught **before** users could hit them

53

commits shipped this weekend —
every feature runtime-tested
before push

02

WHERE IT STANDS

Live right now

- Full product, web + iPhone, real data, honest UI
- Engine complete: all document types, all reasoning passes
- Daily cron sweeping warranties + recalls in production
- Search, home switching, emergency mode, printable home record, guided capture, barcode scanner

Waiting on keys (build done)

FEATURE	NEEDS	
All outbound email	Domain + Resend key (~20 min)	
Gmail receipt import	Google OAuth creds	
House-number autocomplete	Mapbox key	
Property record prefill	RentCast key	

03

NEXT STEPS + TESTING

This week

1. **Domain + Resend** → the app finally speaks first
2. Alexis accepts her invite → household of two
3. Both phones on TestFlight, real receipts weekly
4. Publish terms + privacy after review

We are beta household #1

- Every receipt, manual, and warranty in the house goes in
- Ask it real questions — "when did we buy the grill?"
- Accept/reject its suggestions — that tunes the engine
- Friction goes in a shared note → becomes next build list
- Usage analytics already flowing to the admin dashboard

04

GO TO MARKET

Who it's for first

The Recent Buyer — closed within 18 months, inherited a house with zero documentation and a 40-page inspection report.

Their inspection report is the perfect first upload — HomeOS already turns it into a task list.

Second wave: DIY maintainers — spreadsheet keepers, repair-YouTube watchers.

How we reach them

- **Reddit first** — value-first answers in homeowner subs, 20-spot beta ask. \$0, 30 min/day
- Build-in-public on X
- SEO pages generated from our own maintenance data
- Realtor closing-gift channel — "gift HomeOS pre-loaded with the inspection report"
- Product Hunt only after retention proves out

Launch gates (no vanity launches)

- Private beta: 20 households from Reddit
- Public beta when activation $\geq 40\%$ — signup $\rightarrow$ first document uploaded
- Product Hunt when day-30 retention $\geq 25\%$
- Year-1 north star: **weekly active households**

Future build

- **Now** — outbound email, household polish, publish legal
- **Next** — Gmail auto-import, clickable citations, member management, Stripe + Premium
- **Later** — iPhone push + App Store 1.0, photo vision, Move Mode, contractor marketplace

The house finally remembers.
